### Instructions for Filling out the Data Collection Table

1	Use the table below to provide a summary of how the building materials from the project were handled (Reused, Recycled or Landfilled). You can enter more than one 'Method of Handling' in a row (Example: windows were both reused & landfilled).
2	Provide data on the materials listed in the 'Material Type' column if they are present within your project. Any project materials that are present but not listed, can be added within the blank spaces provided.
3	Please do not pre-estimate quantities. An 'Optional - RollOff Estimate' sheet has been provided within this plan for assistance in estimation and tracking quantities prior to entering the final weights within this chart.
4	<i>The Additional Information Column can be used to provide extra information or specific information as outlined by the City/County.</i>
